Meeting Agenda

Location: Grupprum 5207

Date: 2012-03-21

Time: 15:00-17:00

Facilitator: Jonatan Rapp

Participants: Jonatan Rapp, Sebastian Odbjer, Alexander Hederstaf

1. Objectives (10 min)

    - Finish the demo's model and prepare for implementation of Controller and View.

2. Reports (10 min)

    - A lot of small tweaks and improvements to the demo classes in general.

    - Further designed UI sketch and discussion about the seminar earlier in the day and the feedback received on Domain model.

3. Discussion items (45 min)

    - How to calculate battle events specifically (in code).

    - How to handle fleets and ship types in battle events.

    - Adjustments to be made on Domain model.

4. Outcomes and assignments (50 min)

    - Demo model practically complete and functional. We should start looking toward demo Controller and demo View class implementation.

5. Wrap up (5 min)

    - We still need to work further on GUI design next meeting.

    - We need to implement simple View and Controller classes for the demo. This   should be possible now that the model is better defined.
